

Prisma Access Autonomous DEM (ADEM) Overview

Autonomous Digital Experience Management (ADEM) is built into Prisma Access and provides end-to-end visibility into the user-to-application experience.

Key capabilities:

- Synthetic monitoring runs scripted tests from the endpoint and from Prisma Access nodes.
- Real user monitoring captures live session metrics for SaaS and private applications.
- Segment-wise analysis isolates whether a problem is the endpoint, WiFi, ISP, or app.

Licensing and limits:

- ADEM requires a per-user ADEM license in addition to the Prisma Access license.
- A single tenant supports up to 200,000 monitored users.
- Synthetic tests support a minimum probe interval of 5 minutes.

ADEM data is retained for 30 days by default and is accessible from Strata Cloud Manager.
